PROFESSIONAL SUMMARY

Full Stack Engineer with experience building scalable web applications, modular backend systems, and performance-sensitive user interfaces. Strong focus on backend architecture, asynchronous processing, multi-tenant access control, and developer-friendly product delivery.

TECHNICAL SKILLS

Languages: Rust (Systems), TypeScript, JavaScript (ES6+), SQL
Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, shadcn/ui
Backend: Node.js, NestJS, RabbitMQ, Redis, PostgreSQL, MongoDB
Infrastructure: GCP (GKE), Acens(Cloud), Docker, Kubernetes, CI/CD, System Design
Architecture: Event Storming/Modeling, EDA, Saga & CQRS, RBAC/SSO, TDD, DDD

PROFESSIONAL EXPERIENCE

Full Stack Developer (Promoted 3x for Exceptional Performance) **Zenmonk Software And Services (FUNIBER)**
June 2023 – Present

- **Enterprise Architecture:** Led re-engineering of a complex IBMS and project management platform by breaking business flows into modular, event-driven services using event modeling and event storming.
- **Latency Engineering:** Reduced document processing time from 5 minutes to 15 seconds for 10k+ concurrent records by converting synchronous routes into asynchronous, parallelized chunk-processing pipelines.
- **Advanced RBAC:** Designed a runtime-configurable RBAC system with SSO support and strict tenant isolation for a multi-tenant ERP.
- **Frontend Performance:** Improved frontend performance for data-heavy screens by implementing table virtualization for 1500+ dynamic cells, reducing DOM overhead and interaction latency.
- **Cloud & Microservices:** Supported migration of a legacy monolith to RabbitMQ-powered services deployed on GCP (GKE) and Acens, helping improve deployment frequency.
- **Security:** Implemented MongoDB field-level encryption for sensitive PII and added resilient message-handling patterns to reduce failures during peak throughput.
- **Engineering Lead:** Worked across engineering, QA, product, and design to improve technical feasibility checks early in the delivery cycle and shorten feedback loops.

SELECTED TECHNICAL PROJECTS

- **FileBridge:** Desktop application that converts local folders into file-sharing servers via QR-code pairing for seamless cross-device networking and I/O. [🔗](#) [🐙](#)
- **High-Performance Load Balancer (Rust):** Built a modular Layer-4 load balancer in Rust supporting Round Robin and IP Hash algorithms for concurrent network traffic. [🐙](#)
- **Axon (Vision-to-Action):** Chrome extension utilizing GPT-4o Vision to automate complex web workflows, including intelligent form-filling and real-time content scraping. [🔗](#)
- **Redis Lite:** Multi-threaded Redis protocol (TCP/IP) implementation in Rust, focused on low-latency concurrent key-value operations. [🐙](#)

EDUCATION

B.Tech in Computer Science & Engineering	Lovely Professional University	7.86/10 CGPA
