PROFESSIONAL SUMMARY

Full Stack Engineer with 3+ years of experience and **3 promotions** for high-impact delivery. Specialized in **TypeScript ecosystems** and **real-time systems**, with a proven track record of reducing document processing latency by **95%**. Expert in architecting **event-driven microservices** and high-performance, **multi-tenant enterprise platforms**

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL

Frontend: React.js, Next.js, Vite, Redux Toolkit, Tailwind CSS, shadcn/ui, Material UI

Backend: Node.js, NestJS, Socket.IO, RabbitMQ, Redis, PostgreSQL, MongoDB, Stripe

Infrastructure: GCP (GKE), Acens(Cloud), Docker, Kubernetes, CI/CD, System Design, WebRTC, HLS

Architecture & Testing: Event Storming/Modeling, EDA, Saga & CQRS, RBAC/SSO, TDD, DDD, Jest, Testing Library, API Design (REST/GraphQL/OpenAPI)

PROFESSIONAL EXPERIENCE

Full Stack Developer (Promoted 3x for Exceptional Performance) **Zenmonk Software And Services (FUNIBER)**
June 2023 – Present

- **Enterprise Architecture:** Led re-engineering of a complex IBMS and project management platform by breaking business flows into modular, **event-driven services** using **event modeling**, **event storming**, and **Saga & CQRS patterns** for distributed transaction consistency.
- **Latency Engineering:** Reduced document processing time from 5 minutes to 15 seconds for 10k+ concurrent records by converting synchronous routes into **asynchronous, parallelized chunk-processing pipelines**.
- **Advanced RBAC:** Designed a runtime-configurable **RBAC system** with **SSO support** and strict **tenant isolation** for a **multi-tenant ERP**.
- **Frontend Performance:** Improved **React.js/Next.js** frontend performance for data-heavy screens by implementing **table virtualization** for 1500+ dynamic cells, reducing DOM overhead and interaction latency.
- **Cloud & Microservices:** Supported migration of a legacy **Node.js/NestJS** monolith to **RabbitMQ-powered services**, containerized with **Docker** and deployed via **CI/CD pipelines** to **GCP (GKE)** and **Acens**, helping improve deployment frequency.
- **Security:** Implemented **MongoDB field-level encryption** for sensitive PII and added resilient **message-handling patterns** to reduce failures during peak throughput.
- **Testing & Performance:** Adopted **TDD with Jest** across core services and introduced **Redis caching** for frequently accessed data, improving API response times and reducing database load.
- **Engineering Leadership:** Owned **technical design and RFCs** for major initiatives, **mentored engineers** through code reviews and pairing, and partnered directly with QA, product, and design stakeholders to sharpen feasibility checks early in the delivery cycle and shorten feedback loops.

SELECTED TECHNICAL PROJECTS

- **Axon (Vision-to-Action):** Personal Chrome extension utilizing **GPT-4o Vision** to automate complex web workflows, including intelligent **form-filling** and real-time **content scraping**. [🔗](#)
- **Buck:** Core engineer with **full ownership** of this live-streaming platform (Next.js), where creators start live streams and viewers either **subscribe to creators** or watch free as **ad-supported users**. Built and scaled the web application end-to-end, implementing **authentication**, **subscription-based access**, and **payment integration**, alongside the **live video streaming pipeline** and **Socket.IO-powered real-time interaction** (chat, reactions, participant sync) during sessions. [🔗](#)
- **Maity:** Full-stack build (frontend & backend) of an **AI-powered video personalization** platform for sales outreach. Built the **outreach campaign management** system for sending personalized video messages at scale, a **CRM/integration layer** connecting to sales tools, the **video rendering & delivery backend**, and an **analytics dashboard** tracking views, engagement, and reply rates for sales reps.
